

## BA-FC PORTABLE FILTRATION SYSTEMS

Baron USA filtration systems are compact and light making them very portable. Used for the removal of particle and moisture contamination from a variety of industrial fluids including transformer liquids, hydraulic oil, lube oil, heat transfer oil, compressor oil, cutting fluids, gear oils and others; They are also ideal for the transfer of oil with filtration as well as for topping off electrical devices such as LTC's on OCB's.

Most Baron BA-FC systems use industry standard 6" x 18" (6018) elements available in a variety of types and micron ratings. The wide variety of elements make it so that the same unit can be used to remove particulate, small amounts of free water, reduce total acid number and correct color change due to oxidation.

The filter element is oversized for the oil flow rate to allow long periods of use between changes.

### STANDARD FEATURES AND COMPONENTS:

- 5, 10, 15, 20, 30 and 50 US gpm systems are standard though others are available
- Heavy-duty, self-priming, positive-displacement, direct-driven oil pump; quick-opening filter housings; Inlet suction strainer; system pressure gauge; Inlet and outlet isolation valves; power cord; oil inlet and outlet hoses; operating and maintenance manual.

### ACCESSORIES:

A large variety of configurations and accessories are available including hose reels, integral clean and/or dirty tanks, duplex filters, series filters, trailer flow meters and more.
